

ENCODER

Type: **IMG60B-.....-ABN-.....-S2-V5**

Description

The IMG60B is a robust rotary encoder with clamp-flange for industrial use. The 60 mm external diameter and the 10 mm axis of them make possible very hard wear.

The new developed optical electronics in this encoder guaranteed with differential scanning the code-disk a high technical reliability. The integrated IR-LED-current monitoring with alarm output make possible constant proportion of light.

Beside different pulse numbers and pulse series (8 in one device are to realise at the most), and Operating voltage (10 Volt at TTL-compatibility), this IMG60B will deliver with a 12-pole flanged plug (M16).

The IMG60B can be fixed in front by means of three screws type M3 or M4.

It is particularly qualified to be use with medium and high stress and high speeds.
